

DETROIT™ DRIVE AXLES

TECHNICAL SPECIFICATIONS

WEIGHT RATINGS **13,000-23,000 lb.**

BACKED BY MANY YEARS OF MANUFACTURING EXPERTISE, THESE INNOVATIVE DETROIT™ AXLES PROVIDE MARKET-LEADING PERFORMANCE AND VALUE. HERE ARE SOME OF THE BENEFITS:

Driving Innovation for Your Driving Performance

- Precision-cut gear sets allow higher torque applications and quieter operation
- Elimination of the pinion head bearing allows for larger differential, for added stability and durability
- Significant weight advantage
- Increased ground clearance (Model 2)
- Easy maintenance and less oil capacity reduce lifecycle costs
- Compatible with all brakes offered by Freightliner Trucks and Western Star Trucks
- Warranty is based on truck application, up to 2 years, unlimited miles

DETROIT™ SINGLE REAR AXLES ARE MORE THAN DURABLE. THEY'RE PRECISE. We precision-machine the gears for more efficient operation. Our rear axle design features fewer parts allowing us to increase the size of our differential. What this means to you is greater stability on the road and improved durability. Are you looking for weight savings without sacrificing payload? With our single rear axles you can choose a lighter axle model depending on your torque application. This allows for larger payloads and improved fuel efficiency.

Precision-cut provides quiet operation and higher performance.

Optional Equipment

- More grip when you need it: Our single rear axle can be spec'd with a driver-controlled differential lock (DCDL)
- An alternative to the DCDL is an automatic locking differential (NoSpin)
- A driveline-mounted parking brake can be spec'd for applications using hydraulic brakes
